

Bharath Keyboard – Keyboard for Indian Languages

I like to put my thoughts in points so that I can present ideas as fast as possible

- 1) In India we have demand for Indian language content that is happening on Mobile Phones, Content creation usually happens on Desktop or Laptop. Above shown keyboard will make it easy to create content on PCs or Laptops.
- 2) Teaching and Learning how to use this keyboard will itself create economic system.
- 3) Usage of Indian languages on PCs and Laptops is bit struggle and unintuitive in presently existing keyboards, the layout I have made is simple and clear as in mobile phones.
- 4) I am requesting government to do this job and not doing it myself because
 - a) I am a hobbyist and I have used lots of hacks in making this keyboard, that is not the right way of developing a product.
 - b) To do this in proper way it is either possible for big tech businesses or government as it requires minor addition or changes to existing systems.

5) I think this will have positive impact on education, communication, culture, entertainment and many other areas.

Description of some buttons on the keyboard :

Language Toggle Button

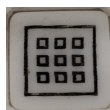

Halanta – To write hybrid characters

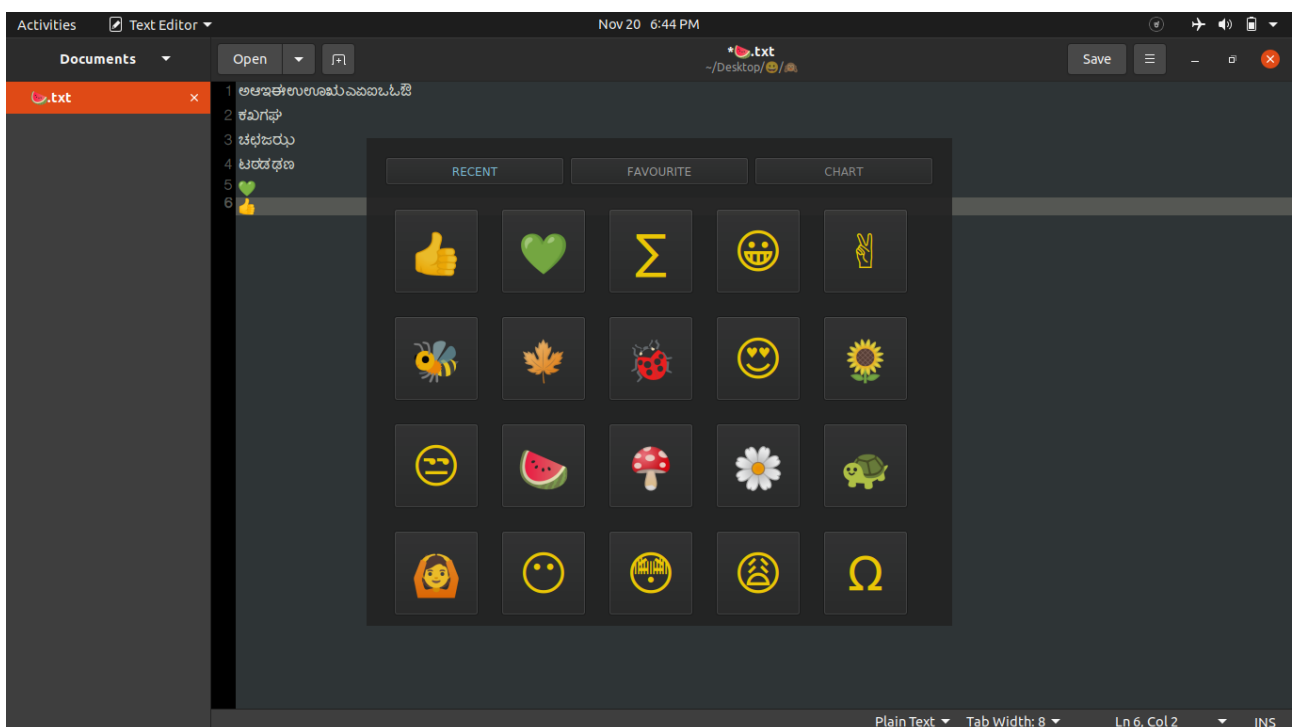

Example of using Halanta

ಕ +  + ಕ = ಕ್ಕ

Character Chart Button (Quick Chart Button)

Pressing the above button will open chart of special characters

Some example layouts are shown below this can be used for almost all Indian Languages
